ALPHABETICAL LIST OF PROBLEMS

CHAPTER 1 MATERIALS

1.1	Atomic Structure	5-1
1.2	Metals	5-1
1.3	Atomic Radius	5-2
1.4	Gases	5-2
1.5	Liquids	5-2
1.6	Glasses	5-3
1.7	Solids	5-3
1.8	Crystal Structure	5-4
1.9	Materials Review Questions	5-4

CHAPTER 2 UNIT CELLS, MILLER INDICES

2.1	Unit Cell	5-5
2.2	Miller Indices for Cubic Unit Cells	5-6
2.3	Example Problems	5-8
2.3.1	Example Problem 1 — Front Face of a Cubic Unit Cell	5-8
2.3.2	Example Problem 2 — Bottom Face of a Cubic Unit Cell	5-9
2.3.3	Example Problem 3 — Back Face of the Cubic Cell	5-9
2.3.4	Example Problem 4 — Plane	5-10
2.3.5	Example Problem 5 — Non-Parallel Planes	5-11
2.3.6	Example Problem 6 — Plane in fcc	5-11

2.4	Distances Between Planes	5-12
2.5	Example Problems	5-12
2.5.1	Example Problem 1 — Parallel Planes (100) in Simple Cube	5-12
2.5.2	Example Problem 2 — Parallel Planes (111) in fcc	5-13
2.5.3	Example Problem 3 — Parallel Planes (300) in Simple Cube	5-14
2.6	Miller Indices in Non-Cubic Unit Cells	5-15
2.7	Example Problem	5-15
2.7.1	Example Problem 1 — Triclinic Unit Cell	5-15
2.8	Miller Indices in the Hexagonal Unit Cell	5-16
2.9	Example Problem	5-16
2.9.1	Example Problem 1 — Hexagonal Unit Cell	5-16
2.10	Indices for Directions	5-17
2.11	Example Problem	5-17
2.11.1	Example Problem 1 — Directions	5-17
2.12	Planar Density	5-18
2.13	Example Problem	5-18
2.13.1	Example Problem 1 — Density of Atoms	5-18
2.14	Linear Density	5-20
2.15	Example Problems	5-20
2.15.1	Example Problem 1 — Linear Density Comparison	5-20
2.15.2	Example Problem 2 — Linear Density in Nickel	5-21
2.16	Number of Atoms in a Unit Cell	5-22
2.17	Volume of a Unit Cell from Atomic Radius	5-22
2.18	Density of the Unit Cell from Atomic Radius	5-23
2.19	Unit cells, Miller Indices Review Questions	5-25

CHAPTER 3

MECHANICAL PROPERTIES I

3.1	Tensile Test	5-27
3.2	Tensile and Compressive Strains	5-29
3.3	Poisson's Ratio	5-30
3.4	Shear Strains	5-31
3.5	Stress	5-31
3.6	Modulus	5-32
3.7	Stress-Strain Diagram for Ideal Material	5-33

3.8	Work Hardening	5-35
3.9	Example Problem	5-36
	3.9.1 Example Problem 1 — Steel Stress-Strain	5-36
3.10	Yield Point and Yield Strength	5-36
3.11	Plastic Deformation	5-37
3.12	Work Hardening	5-37
3.13	Ductility	5-38
3.14	Example Problem	5-39
	3.14.1 Example Problem 1 — Reduction in Area	5-39
3.15	Stress Concentrations	5-40
3.16	Example Problem	5-41
	3.16.1 Example Problem 1 — Stress Concentration	5-41
	3.16.2 Example Problem 2 — Stress Concentration from Crack	5-42
3.17	Flaws And Ductility	5-43
3.18	Review Questions	5-44

CHAPTER 4

MECHANICAL PROPERTIES II

4.1	Toughness	5-47
4.2	Fracture Toughness	5-48
4.3	Example Problems	5-50
	4.3.1 Example Problem 1 — Fracture Toughness of Aluminum	5-50
	4.3.2 Example Problem 2 — Fracture Toughness of Steel	5-50
4.4	Toughness, Impact Testing Review Questions	5-51
4.5	Fatigue	5-52
4.6	Fatigue Review Questions	5-52
4.7	Creep	5-53
4.8	Example Problem	5-53
	4.8.1 Example Problem 1 — Creep Problem	5-53
4.9	Creep Review Questions	5-53
4.10	Hardness	5-54
	4.10.1 Rockwell Hardness	5-54
	4.10.2 Brinell Hardness	5-55
	4.10.3 Diamond-Pyramid Hardness	5-55
	4.10.4 Knoop Hardness	5-56

4.11	Hardness Review Questions	5-56
4.12	Viscoelasticity	5-57
4.13	Example Problem	5-57
4.13.1	Example Problem 1 — Strain of PVC	5-57
4.14	Viscoelastic Recovery	5-58

CHAPTER 5 RECRYSTALLIZATION, GRAIN GROWTH

5.1	Work Hardening	5-59
5.2	Dislocations	5-60
5.3	Recrystallization	5-60
5.4	Recrystallizations, Grain Growth Review Questions	5-62

CHAPTER 6 PHASE DIAGRAMS

6.1	Example Problem	5-64
6.1.1	Example Problem 1 — Need Title	5-64
6.2	Phase Diagrams Review Questions	5-65
6.3	Steels Review Questions	5-65
6.4	Cast Irons Review Questions	5-66
6.5	Aluminum Review Questions	5-66

CHAPTER 7 CORROSION

7.1	Basic Definitions	5-67
7.1.1	Oxidation	5-67
7.1.2	Reduction	5-67
7.1.3	Anode	5-67
7.1.4	Cathode	5-67
7.1.5	Electrolyte	5-68
7.2	Oxidation Potential	5-68
7.3	Example Problems	5-68
7.3.1	Example Problem 1 — Need Title	5-68
7.3.2	Example Problem 2 — Need Title	5-69
7.3.3	Example Problem 3 — Need Title	5-69
7.3.4	Example Problem 4 — Need Title	5-69
7.3.5	Example Problem 5 — Need Title	5-69
7.3.6	Example Problem 6 — Need Title	5-69

7.4	Diffusion	5-70
7.5	Example Problems	5-70
	7.5.1 Example Problem 1 — Need Title	5-70
	7.5.2 Example Problem 2 — Need Title	5-70
	7.5.3 Example Problem 3 — Need Title	5-71
	7.5.4 Example Problem 4 — Need Title	5-71
7.6	Iron-Carbon Phase Diagram	5-71
7.7	Example Problems	5-71
	7.7.1 Example Problem 1 — Need Title	5-71
	7.7.2 Example Problem 2 — Need Title	5-71
	7.7.3 Example Problem 3 — Need Title	5-72
	7.7.4 Example Problem 4 — Need Title	5-72
	7.7.5 Example Problem 5 — Need Title	5-72
	7.7.6 Example Problem 6 — Need Title	5-72
7.8	Hardenability	5-72
7.9	Example Problems	5-72
	7.9.1 Example Problem 1 — Need Title	5-72
	7.9.2 Example Problem 2 — Need Title	5-73
	7.9.3 Example Problem 3 — Need Title	5-73
7.10	Composites	5-73
7.11	Example Problems	5-73
	7.11.1 Example Problem 1 — Need Title	5-73
	7.11.2 Example Problem 2 — Need Title	5-73
	7.11.3 Example Problem 3 — Need Title	5-73

CHAPTER 8

NCEES FORMULAS — MATERIAL SCIENCE/STRUCTURE OF MATTER

8.1	Crystallography	5-75
	8.1.1 Common Metallic Crystal Structures	5-75
	8.1.2 Number of Atoms in a Cell	5-76
	8.1.3 Packing Factor	5-76
	8.1.4 Coordination Number	5-76
	8.1.5 Miller Indices	5-77
8.2	Atomic Bonding	5-78
	8.2.1 Primary Bonds	5-78

8.3	Corrosion	5-78
	8.3.1 Anode Reaction (Oxidation)	5-78
	8.3.2 Possible Cathode Reactions (Reduction)	5-78
8.4	Diffusion	5-78
	8.4.1 Diffusion coefficient	5-78
8.5	Binary Phase Diagrams	5-79
	8.5.1 Lever Rule	5-79
	8.5.2 Iron-Iron-Carbide Phase Diagram	5-80
	8.5.3 Gibbs Phase Rule	5-80
8.6	Thermal Processing	5-80
8.7	Testing Methods	5-80
	8.7.1 Standard Tensile Test	5-80
	8.7.2 Endurance Test	5-81
	8.7.3 Impact Test	5-81
8.8	Hardenability	5-82
8.9	ASTM Grain Size	5-83
8.10	Composite Materials	5-83

INDEX

TABLE OF CONTENTS

ABOUT THE AUTHOR
TABLE OF CONTENTS
LIST OF FIGURES
ALPHABETICAL LIST OF PROBLEMS
REFERENCE

CHAPTER 1 INTRODUCTION

1.1	Description of Review Materials	6A-1
1.2	EIT Examination	6A-1
1.3	Solution Methods	6A-2
1.4	Examination Syllabus	6A-2

CHAPTER 2 FREE-BODY DIAGRAMS AND REACTIONS

2.1	Free-Body Diagrams	6A-5
2.2	Resolution of Forces	6A-7
2.3	Resultant of Forces	6A-8
2.4	Equilibrium Equations	6A-8
2.5	Example Problems	6A-11
2.5.1	Example Problem 1 — Resultant of Forces	6A-11
2.5.2	Example Problem 2 — Reactions of a Simple Beam	6A-13
2.5.3	Example Problem 3 — Reactions of a Beam with Inclined Supports	6A-14
2.5.4	Example Problem 4 — Reactions of a Compound Beam ..	6A-16

CHAPTER 3 TWO-DIMENSIONAL EQUILIBRIUM PROBLEMS

3.1	General Considerations	6A-21
3.2	Special Cases	6A-22
3.2.1	Two-Force Body	6A-22
3.2.2	Three-Force Body	6A-22

3.3	Solution Techniques	6A-22
3.4	Example Problems	6A-23
3.4.1	Example Problem 1 — Beam with a Pulley	6A-23
3.4.2	Example Problem 2 — Reactions of a Compound Frame .	6A-25
3.4.3	Example Problem 3 — Truss Supported by Three Links ..	6A-28
3.4.4	Example Problem 4 — Three Hinged Frame	6A-31
3.4.5	Example Problem 5 — Frame Supporting a Load	6A-33
3.4.6	Example Problem 6 — Overhanging Beam	6A-35
3.4.7	Example Problem 7 — Pulley on a Cable	6A-37
3.4.8	Example Problem 8 — Raising of a Tank	6A-39
3.4.9	Example Problem 9 — Rod Supported by Two Cables	6A-41

CHAPTER 4

VECTORS AND THREE-DIMENSIONAL EQUILIBRIUM PROBLEMS

4.1	General Considerations	6A-43
4.2	Position Vectors and Force Vectors	6A-44
4.2.1	Position Vector	6A-44
4.2.2	Unit Vector	6A-44
4.2.3	Direction Cosines	6A-45
4.2.4	Force Vector	6A-45
4.3	Example Problems	6A-46
4.3.1	Example Problem 1 — Force Vector Defined by Inclination to Axes	6A-46
4.3.2	Example Problem 2 — Force Vector Defined by Inclination to Axes	6A-47
4.3.3	Example Problem 3 — Force Vector Defined by Inclination to Coordinate Planes	6A-48
4.3.4	Example Problem 4 — Force Vector Defined by Inclination to Coordinate Planes	6A-49
4.3.5	Example Problem 5 — Force Vector Defined by Inclination to Coordinate Planes	6A-50
4.3.6	Example Problem 6 — Force Vector Defined by Coordinates	6A-51
4.4	Scalar Product	6A-52
4.5	Example Problems	6A-53
4.5.1	Example Problem 1 — Angle Between Two Forces	6A-53
4.5.2	Example Problem 2 — Resolution of a Force in Two Directions	6A-54

4.6	Vector Product	6A-55
4.7	Example Problem	6A-56
4.7.1	Example Problem 1 — Moment of a Force About a Point .	6A-56
4.8	Triple Scalar Product	6A-58
4.9	Example Problems	6A-58
4.9.1	Example Problem 1 — Cable Supporting Door with Hinges	6A-58
4.9.2	Example Problem 2 — Cable Supporting a Bent Rod	6A-61
4.10	Resultant of Forces on a Rigid Body	6A-64
4.11	Equilibrium of a Rigid Body	6A-64
4.12	Equilibrium of a Particle	6A-64
4.13	Example Problem	6A-65
4.13.1	Example Problem 1 — Equivalent Force-Couple System ..	6A-65
4.14	Solution Techniques	6A-66
4.15	Example Problems	6A-66
4.15.1	Example Problem 1 — Slab Supporting Columns	6A-66
4.15.2	Example Problem 2 — Cables Supporting Loads	6A-67
4.15.3	Example Problem 3 — Load Supported by Three Wires ..	6A-69
4.15.4	Example Problem 4 — Space Truss	6A-72

CHAPTER 5

INTERNAL FORCES IN TRUSSES

5.1	Bar Forces in Plane Trusses	6A-75
5.2	Discussion of Method of Joints	6A-78
5.2.1	Case 1: One Vertical Member and One Horizontal Member	6A-79
5.2.2	Case 2: One Vertical Member and One Inclined Member .	6A-79
5.2.3	Case 3: One Horizontal Member and One Inclined Member	6A-80
5.2.4	Case 4: Both Members Are Inclined	6A-81
5.2.5	Checking Bar Forces	6A-85
5.3	Special Cases of Bar Forces	6A-86
5.4	P. E. Problem	6A-87
5.5.1	P. E. Problem 1 — 1972 Simple Truss	6A-87
5.5	Example Problem	6A-93
5.4.1	Example Problem 1 — Truss Member Forces by Inspection	6A-93
5.6	Discussion of Method of Sections	6A-95
5.7	Example Problems	6A-97
5.7.1	Example Problem 1 — Compound Truss	6A-97
5.7.2	Example Problem 2 — Simple Truss	6A-99
5.7.3	Example Problem 3 — Truss Using Method of Joints	6A-102
5.7.4	Example Problem 4 — Compound Truss — Method of Sections	6A-105

CHAPTER 6

INTERNAL FORCES IN BEAMS

6.1	Shear Force, Bending Moment and Axial Forces in Beams and Frames	6A-109
6.2	Sign Conventions	6A-109
6.2.1	Static Sign Convention	6A-109
6.2.2	Deformation Sign Convention	6A-110
6.2.3	Discussion	6A-111
6.3	Shear Force and Bending Moment in Beams	6A-112
6.4	Example Problem	6A-114
6.4.1	Example Problem 1 — Internal Forces in a Bent	6A-114
6.5	Relations Between Applied Loads, Shear, and Bending moment ...	6A-117
6.5.1	Important Concepts	6A-119
6.6	Example Problems	6A-121
6.6.1	Example Problem 1 — Beam with Left Overhang	6A-121
6.6.2	Example Problem 2 — Shear and Moment Diagrams — Simple Beam	6A-123
6.6.3	Example Problem 3 — Beam with Right Overhang	6A-124
6.6.4	Example Problem 3 — Beam with Right Overhang	6A-125
6.6.5	Example Problem 5 — Beam with Overhangs on Both Sides	6A-126
6.6.6	Example Problem 6 — Cantilever Beam	6A-128
6.6.7	Example Problem 7 — Beam with Concentrated Moments	6A-129
6.6.8	Example Problem 8 — Beams with Distributed Loads	6A-132
6.6.9	Example Problem 9 — Beam with Linearly Varying Loads	6A-134
6.7	P. E. Problem	6A-136
6.7.1	P. E. Problem 1 — Timber Beam with Uniform Loads	6A-136

CHAPTER 7

INTERNAL FORCES FRAMES

7.1	Introduction	6A-139
7.2	Example Problems	6A-140
7.2.1	Example Problem 1 — A Simple Frame	6A-140
7.2.2	Example Problem 2 — Frame with Inclined Members	6A-144

CHAPTER 8

FRICTION

8.1	Basic Concepts	6A-145
8.2	Solution Techniques	6A-146

8.3	Example Problems	6A-147
8.3.1	Example Problem 1 — Sliding of Blocks	6A-147
8.3.2	Example Problem 2 — Pulling a Sledge	6A-150
8.3.3	Example Problem 3 — Sliding Bracket	6A-153
8.3.4	Example Problem 4 — Climbing a Ladder	6A-155
8.3.5	Example Problem 5 — Tipping of a Cabinet	6A-158
8.3.6	Example Problem 6 — Driving a Wedge	6A-160
8.3.7	Example Problem 7 — Rope Around a Capstan	6A-162

CHAPTER 9**SECTION PROPERTIES**

9.1	Centroids, Moments and Products of Inertia	6A-165
9.1.1	Centroids	6A-166
9.1.2	Moments of Inertia	6A-167
9.2	Parallel Axis Theorem	6A-168
9.3	Properties of Primitive Sections	6A-168
9.4	Example Problem	6A-169
9.4.1	Example Problem 1 — Centroid of Parabolic Spandrel by Integration	6A-169
9.5	Properties of Composite Sections	6A-172
9.5.1	Example Problem 1 — Centroid of a Hollow Section	6A-173
9.6	Theorems of Pappus and Guldinus	6A-174
9.6.1	Surface of Revolution	6A-174
9.6.2	Solids of Revolution	6A-175
9.7	Example Problems	6A-176
9.7.1	Example Problem 1 — Properties of Revolution of a Rim	6A-176
9.7.2	Example Problem 2 — Volume of Solids of Revolution	6A-178
9.8	Moment of Inertia	6A-180
9.9	Example Problems	6A-180
9.9.1	Example Problem 1 — Moment of Inertia of a Rectangle	6A-180
9.9.2	Example Problem 2 — Moment of Inertia by Direct Integration	6A-182
9.9.3	Example Problem 3 — Moment of Inertia by Parts	6A-183
9.9.4	Example Problem 4 — Properties of a Composite Section	6A-184
9.10	Principal Moments of Inertia	6A-187
9.11	Mohr's Circle for Moments of Inertia	6A-190

9.12	Example Problem	6A-190
9.12.1	Example Problem 1 — Moments of Inertia and Product of Inertia	6A-190

CHAPTER 10

INTERNAL STRESSES AND DEFORMATIONS

10.1	Stresses and deformations in Truss Members	6A-195
10.2	Popular Conventions	6A-198
10.3	Bodies Under Axial Loading: Normal Stress, Strain	6A-199
10.4	Axial Loading	6A-200
10.5	Stress Concentration Factor (K)	6A-200
10.6	Factor of Safety (FS)	6A-201
10.7	Example Problems	6A-201
10.7.1	Example Problem 1 — Sizing of a Member	6A-201
10.7.2	Example Problem 2 — Elasto-Plastic Behavior	6A-202
10.8	Poisson's Ratio: Generalized Hooke's Law	6A-206
10.8.1	Relationship Among Three Moduli	6A-207
10.9	Biaxial Stress: Example of Thin Cylinder	6A-207
10.10	Stresses and Deformations in Beams	6A-208
10.11	Transverse Loading	6A-208
10.12	Transverse Load, Shear and Bending Moment Diagrams	6A-210
10.12.1	Bending Stresses and Deformations	6A-212
10.13	Eccentric Loading: Combined Flexural and Normal Stress	6A-213
10.13.1	Example Problem 1 —	6A-213
10.13.2	Shear Stresses and Deformations	6A-214
10.14	Example Problems	6A-216
10.14.1	Example Problem 1 — Shear Stress in a Rectangular Section	6A-216
10.14.2	Example Problem 2 — Shear Stress at Various Levels of a Section	6A-218
10.15	Torsion: Shear Stress, Shear Strain and Angular Deformation	6A-220
10.16	Stresses and Deformations Due to Torsion	6A-221
10.17	Example Problem	6A-222
10.17.1	Example Problem 1 — Torsion	6A-222
10.18	Biaxial Stresses	6A-223
10.19	Principal Stresses and Maximum Shear Stress	6A-224

10.20	Example Problems	6A-226
10.20.1	Example Problem 1 — Principal Stresses	6A-226
10.20.2	Example Problem 2 — Mohr's Circle	6A-229

CHAPTER 11

METHODS OF COMPUTING DISPLACEMENTS

11.1	Discussion of Various Methods	6A-233
11.2	Beam Deflection	6A-234
11.2.1	By Double-Integration Method	6A-234
11.3	Example Problems	6A-236
11.3.1	Example Problem 1 — Simple Beam with One Load	6A-236
11.3.2	Example Problem 2 — Overhang Beam with Partial Distributed Load	6A-237
11.4	Area-Moment Method	6A-238
11.4.1	Example Problem	6A-241
11.5	Conjugate Beam Method	6A-241
11.6	Example Problem	6A-244
11.6.1	Example Problem 1 — Deflection of a Non-uniform Beam	6A-246
11.7	Comparison of Various Methods	6A-246
11.8	Example Problem	6A-247
11.8.1	Example Problem 1 — Deflection of Overhang Beam	6A-247
11.9	Strain Energy Method	6A-251
11.9.1	Example Problem	6A-251

CHAPTER 12

BUCKLING OF COLUMNS

12.1	Buckling of Columns	6A-253
12.2	Example Problems	6A-255
12.2.1	Example Problem 1 — Axial Buckling of a Column	6A-255
12.2.2	Example Problem 2 — Design of a Column for Buckling ..	6A-256

CHAPTER 13

NCEES FORMULAS — STATICS

13.1	Force	6A-259
13.2	Resultant	6A-259
13.3	Resolution of a Force	6A-259

13.4	Moments (Couples)	6A-260
13.5	Systems of Forces	6A-260
13.5.1	Equilibrium Requirements	6A-260
13.6	Centroids of Areas, Lengths, and Volumes	6A-260
13.7	Moment of Inertia	6A-261
13.7.1	Moment of Inertia Transfer Theorem	6A-261
13.7.2	Radius of Gyration	6A-262
13.7.3	Product of Inertia	6A-262
13.8	Friction	6A-262
13.9	Screw Thread	6A-262
13.10	Brake-Band or Belt Friction	6A-263
13.11	Statically Determinate Truss, Concurrent Forces	6A-263
13.11.1	Plane Truss	6A-263
13.11.2	Plane Truss: Method of Joints	6A-263
13.11.3	Plane Truss: Method of Sections	6A-263
13.11.4	Concurrent Forces	6A-264

CHAPTER 14

NCEES FORMULAS — MECHANICS OF MATERIALS

14.1	Definitions	6A-269
14.1.1	Uniaxial Loading and Deformation	6A-270
14.2	Thermal Deformations	6A-270
14.3	Thin Walled Cylindrical Pressure Vessel	6A-270
14.3.1	Hoof Tension	6A-270
14.3.2	Axial Tension	6A-271
14.4	Stress and Strain	6A-271
14.4.1	Mohr's Circles — Stress	6A-271
14.4.2	Strain — General Case	6A-272
14.5	Torsion	6A-273
14.5.1	For Hollow, Thin-Walled Shafts	6A-274
14.6	Beams	6A-274
14.6.1	Shearing Force and Bending Moment Sign Conventions ..	6A-274
14.6.2	Stresses in Beams	6A-274
14.6.3	Deflection of Beams	6A-276
14.7	Columns	6A-276

14.7.1	Beam-Columns (Axially Loaded Beams)	6A-276
14.7.2	Long Columns — Euler's Formula	6A-276
14.7.3	Commonly Used k Values for Columns	6A-277
14.8	Elastic Strain Energy	6A-277

CHAPTER 1

STRESSES AND STRAINS

1.1	Uniaxial Stress – Strain	5-1
1.1.1	General Discussion	5-1
1.1.2	Material behavior	5-2
1.1.3	Stress Concentration Factor (K)	5-3
1.1.4	Factor Of Safety (FS)	5-3
1.2	Three-dimensional Stresses and Poisson's Ratio	5-3
1.3	Relationship Among Three Moduli	5-4
1.4	Stresses and deformations in Truss Members	5-5
1.5	Example Problems	5-8
1.5.1	Example Problem 1 — Sizing of a Member	5-8
1.5.2	Example problem 2 – Modulus of Rigidity and Bulk Modulus ...	5-8
1.5.3	Example Problem 3 Elongation of Bars	5-9
1.6	Thermal Stresses	5-10
1.6.1	Example problem 1 – Thermal stresses	5-10
1.7	Thin Walled Cylindrical pressure vessel	5-11
1.8	Example Problem	5-12
1.8.1	EXample problem 1: Pressure vessel	5-12
1.9	Internal Forces in Prismatic Members	5-13
1.10	Stresses and Deformations in Beams	5-14
1.10.1	Bending Stresses	5-14

1.10.2	Bending Deformations	5-15
1.10.3	Transverse Load, Shear and Bending Moment Diagrams ..	5-15
1.10.4	Transverse Loading	5-17
1.11	Example Problem	5-19
1.11.1	Example Problem 1 — Eccentric Loading	5-19
1.12	Shear Stresses and Deformations	5-20
1.13	Example Problems	5-22
1.13.1	Example Problem 1 — Shear Stress in a Rectangular Section ...	5-22
1.13.2	Example Problem 2 — Shear Stress at Various Levels of a Section	5-23
1.14	Torsion: Shear Stress, Shear Strain and Angular Deformation	5-25
1.14.1	Example Problem 1 — Torsion	5-27

CHAPTER 2

BIAXIAL STRESSES

2.1	Biaxial Stresses	5-29
2.2	Principal Stresses and Maximum Shear Stress	5-30
2.3	Example Problems	5-32
2.3.1	Example Problem 1 — Principal Stresses	5-32
2.3.2	Example Problem 2 — Mohr's Circle	5-35
2.4	Strain energy	5-39
2.5	Failure Theories for Static Loading	5-40
2.5.1	Maximum-Normal-Stress Theory	5-40
2.5.2	Maximum-Shear-Stress Theory	5-40
2.5.3	Distortion-Energy Theory	5-40
2.5.4	Failure of Rod Under Axial Tension	5-41

CHAPTER 3

INTERNAL FORCES IN BEAMS

3.1	Shear Force, Bending Moment and Axial Forces in Beams and Frames	5-43
3.2	Sign Conventions	5-43
3.2.1	Static Sign Convention	5-43
3.2.2	Deformation Sign Convention	5-44
3.2.3	Discussion	5-45
3.3	Shear Force and Bending Moment in Beams	5-46

3.4	Example Problem	5-48
3.4.1	Example Problem 1 — Internal Forces in a Beam	5-48
3.5	Relations Between Applied Loads, Shear, and Bending Moment ...	5-50
3.5.1	Important Concepts	5-52
3.6	Example Problems	5-54
3.6.1	Example Problem 1 — Beam with Left Overhang	5-54
3.6.2	Example Problem 2 — Shear and Moment Diagrams — Simple Beam	5-56
3.6.3	Example Problem 3 — Beam with Right Overhang	5-57
3.6.4	Example Problem 3 — Beam with Right Overhang	5-58
3.6.5	Example Problem 5 — Beam with Overhangs On Both Sides ...	5-59
3.6.6	Example Problem 6 — Cantilever Beam	5-61
3.6.7	Example Problem 7 — Beam with Concentrated Moments	5-62
3.6.8	Example Problem 8 — Beams with Distributed Loads	5-65
3.6.9	Example Problem 9 — Beam with Linearly Varying Loads	5-67

CHAPTER 4

METHODS OF COMPUTING DISPLACEMENTS

4.1	Discussion of Various Methods	5-69
4.2	Beam Deflection	5-70
4.2.1	By Double-Integration Method	5-70
4.3	Example Problems	5-71
4.3.1	Example Problem 1 — Simple Beam with One Load	5-71
4.3.2	Example Problem 2 — Overhang Beam with Partial Distributed Load	5-73
4.4	Area-Moment Method	5-74
4.5	Example problem	5-77
4.5.1	Example PProblem 1	5-77
4.6	Conjugate Beam Method	5-80
4.7	Example Problem	5-82
4.7.1	Example Problem 1 — Deflection of a Non-uniform Beam	5-82
4.8	Comparison Of Various Methods	5-83
4.9	Example Problem	5-83
4.9.1	Example Problem 1 — deflection of overhang beam	5-83
4.10	Strain Energy Method	5-87
4.11	Example Problem	5-87
4.11.1	Example Problem 1 — Deflection by Strain Energy	5-87

CHAPTER 5 FRAMES AND COLUMNS

5.1	Introduction	5-89
5.2	Example Problem	5-90
5.2.1	Example Problem 1 — A Simple Frame	5-90
5.3	Combining Stresses	5-94
5.3.1	Example Problem 1 — Stresses in a Beam–Column	5-94
5.4	Long Columns – Euler’s Formula	5-95
5.5	Example Problems	5-97
5.5.1	Example Problem 1 — Axial Buckling of a Column	5-97
5.5.2	Example Problem 2 — Design of a Column for Buckling ..	5-99

CHAPTER 6 NCEES FORMULAS MECHANICS OF MATERIALS

6.1	Uniaxial Stress-Strain	5-101
6.1.1	Stress-Strain Curve for Mild Steel	5-101
6.1.2	Hooke’s Law	5-101
6.1.3	Engineering Strain	5-102
6.2	Definitions	5-102
6.2.1	Shear Stress-Strain	5-102
6.2.2	Uniaxial Loading and Deformation	5-102
6.3	Thermal Deformations	5-103
6.4	Thin-Walled Cylindrical Pressure Vessel	5-103
6.4.1	Hoop Tension	5-103
6.4.2	Axial Tension	5-103
6.5	Stress and Strain	5-104
6.5.1	Mohr’s Circle – Stress	5-104
6.5.2	Strain – General Case	5-106
6.6	Static Loading Failure Theories	5-106
6.6.1	Maximum-Normal-Stress Theory	5-106
6.6.2	Maximum-Shear-Stress Theory	5-106
6.6.3	Distortion-Energy Theory	5-107
6.7	Torsion	5-107
6.7.1	For Hollow, Thin-Walled Shafts	5-108
6.8	Beams	5-108
6.8.1	Shearing Force and Bending Moment Sign Conventions ..	5-108

6.8.2	Stresses in Beams	5-109
6.8.3	Deflection of Beams	5-110
6.9	Columns	5-110
6.9.1	Beam-Columns (Axially Loaded Beams)	5-110
6.9.2	Long Columns – Euler’s Formula	5-111
6.9.3	Commonly Used k Values for Columns	5-111
6.10	Elastic Strain Energy	5-112
6.11	Material Properties	5-112

TABLE OF CONTENTS

ABOUT THE AUTHOR

TABLE OF CONTENTS

ALPHABETICAL LIST OF PROBLEMS

CHAPTER 1

STATICS AND MECHANICS OF MATERIALS — PROBLEMS I

1.1	Multiple Choice Problems 1 through 25	6B-1
1.1.1	Example Problem 1 — Resultant of Forces	6B-2
1.1.2	Example Problem 2 — Force Equilibrium, Two-Dimensional .	6B-2
1.1.3	Example Problem 3 — Frictionless Pulley	6B-3
1.1.4	Example Problem 4 — Direction Vector, Lambda	6B-3
1.1.5	Example Problem 5 — Force Components, Three Dimensions	6B-4
1.1.6	Example Problem 6 — Moment About a Point, Three-Dimensional	6B-4
1.1.7	Example Problem 7 — Moment About an Axis, Three-Dimensional	6B-5
1.1.8	Example Problem 8 — Moment About a Point, Three-Dimensional	6B-6
1.1.9	Example Problem 9 — Angle Between Vectors, Three Dimensions	6B-8
1.1.10	Example Problem 10 — Moment About Point, Two-Dimensional	6B-9
1.1.11	Example Problem 11 — Support Reactions, Beam	6B-9
1.1.12	Example Problem 12 — Internal Joint Force, Frame	6B-10
1.1.13	Example Problem 13 — Frame, Two and Three Force Members	6B-11
1.1.14	Example Problem 14 — Internal Forces, Frame, Multiple Free Bodies	6B-12
1.1.15	Example Problem 15 — Frame, Multiple Free Bodies	6B-13

1.1.16	Example Problem 16 — Truss, Method of Joints	6B-14
1.1.17	Example Problem 17 — Truss, Method of Sections	6B-14
1.1.18	Example Problem 18 — Truss, Method of Sections	6B-15
1.1.19	Example Problem 19 — Friction, Wedges	6B-16
1.1.20	Example Problem 20 — Direction Angle, Lambda	6B-16
1.1.21	Example Problem 21 — Centroid of Area	6B-17
1.1.22	Example Problem 22 — Equivalent Concentrated Load	6B-18
1.1.23	Example Problem 23 — Beam Reactions, Distributed Load . .	6B-18
1.1.24	Example Problem 24 — Hydrostatics	6B-19
1.1.25	Example Problem 25 — Internal Moment, Sign Conventions .	6B-20

CHAPTER 2

STATICS AND MECHANICS OF MATERIALS — PROBLEMS II

2.1	Multiple Choice Problems 26-55	6B-21
2.1.1	Example Problem 26 — Shear and Moment Diagrams	6B-21
2.1.2	Example Problem 27 — Parallel Axis Theorem	6B-22
2.1.3	Example Problem 28 — Moment of Inertia, Simple	6B-23
2.1.4	Example Problem 29 — Moment of Inertia, Integration	6B-23
2.1.5	Example Problem 30 — Axial Deformation	6B-24
2.1.6	Example Problem 31 — Bending Stress	6B-24
2.1.7	Example Problem 32 — Shear Flow	6B-25
2.1.8	Example Problem 33 — Bending Stress, Composite Beam . . .	6B-26
2.1.9	Example Problem 34 — Inertia Transformation	6B-27
2.1.10	Example Problem 35 — Stress Transformation	6B-27
2.1.11	Example Problem 36 — Strain Transformation	6B-28
2.1.12	Example Problem 37 — Stress-Strain Relations	6B-28
2.1.13	Example Problem 38 — Stress-Strain Relations	6B-29
2.1.14	Example Problem 39 — Bending Stress, Combined	6B-30
2.1.15	Example Problem 40 — Combined Stress, Bending and Torsion	6B-31
2.1.16	Example Problem 41 — Force Components, Skewed Axis	6B-32
2.1.17	Example Problem 42 — Force Components, Rectangular Axis	6B-33
2.1.18	Example Problem 43 — Force Components, Three-Dimensional	6B-34
2.1.19	Example Problem 44 — Equivalent Force — Moment System	6B-34
2.1.20	Example Problem 45 — Equivalent Force — Moment System	6B-35

2.1.21	Example Problem 46 — Moment About a Point, Two Dimensions	6B-36
2.1.22	Example Problem 47 — Component Projection, Skewed Angle	6B-37
2.1.23	Example Problem 48 — Beam with Internal Hinge	6B-37
2.1.24	Example Problem 49 — Belt Friction	6B-38
2.1.25	Example Problem 50 — Long Cables	6B-38
2.1.26	Example Problem 51 — Beam Internal Force and Moment ..	6B-39
2.1.27	Example Problem 52 — Friction, Ramp	6B-39
2.1.28	Example Problem 53 — Mass Moment of Inertia	6B-40
2.1.29	Example Problem 54 — Thin Wall Tube	6B-40
2.1.30	Example Problem 55 — Combined Stress, Shear, Bending, Torsion	6B-41

CHAPTER 3

STATICS AND MECHANICS OF MATERIALS — SOLUTIONS I

3.1	Solutions to Multiple Choice Problems 1 thru 13	6B-43
3.1.1	Example Problem 1 — Resultant of Forces	6B-44
3.1.2	Example Problem 2 — Force Equilibrium, Two-Dimensional	6B-46
3.1.3	Example Problem 3 — Frictionless Pulley	6B-47
3.1.4	Example Problem 4 — Direction Vector, Lambda	6B-49
3.1.5	Example Problem 5 — Force Components, Three Dimensions	6B-50
3.1.6	Example Problem 6 — Moment About a Point, Three-Dimensional	6B-51
3.1.7	Example Problem 7 — Moment About an Axis, Three-Dimensional	6B-52
3.1.8	Example Problem 8 — Moment About a Point, Three-Dimensional	6B-54
3.1.9	Example Problem 9 — Angle Between Vectors, Three Dimensions	6B-58
3.1.10	Example Problem 10 — Moment About Point, Two-Dimensional	6B-60
3.1.11	Example Problem 11 — Support Reactions, Beam	6B-61
3.1.12	Example Problem 12 — Internal Joint Force, Frame	6B-62
3.1.13	Example Problem 13 — Frame, Two and Three Force Members	6B-63

CHAPTER 4
STATICS AND MECHANICS OF MATERIALS — SOLUTIONS II

4.1	Solutions to Multiple Choice Problems 14 through 25	6B-65
4.1.1	Example Problem 14 — Internal Forces, Frame, Multiple Free Bodies	6B-66
4.1.2	Example Problem 15 — Frame, Multiple Free Bodies	6B-68
4.1.3	Example Problem 16 — Truss, Method of Joints	6B-70
4.1.4	Example Problem 17 — Truss, Method of Sections	6B-72
4.1.5	Example Problem 18 — Truss, Method of Sections	6B-73
4.1.6	Example Problem 19 — Friction, Wedges	6B-75
4.1.7	Example Problem 20 — Direction Angle, Lambda	6B-76
4.1.8	Example Problem 21 — Centroid of Area	6B-77
4.1.9	Example Problem 22 — Equivalent Concentrated Load	6B-78
4.1.10	Example Problem 23 — Beam Reactions, Distributed Load	6B-79
4.1.11	Example Problem 24 — Hydrostatics	6B-80
4.1.12	Example Problem 25 — Internal Moment, Sign Conventions	6B-82

CHAPTER 5
STATICS AND MECHANICS OF MATERIALS — SOLUTIONS III

5.1	Solutions to Multiple Choice Problems 26 through 38	6B-85
5.1.1	Example Problem 26 — Shear and Moment Diagrams	6B-86
5.1.2	Example Problem 27 — Parallel Axis Theorem	6B-90
5.1.3	Example Problem 28 — Moment of Inertia, Simple	6B-91
5.1.4	Example Problem 29 — Moment of Inertia, Integration	6B-93
5.1.5	Example Problem 30 — Axial Deformation	6B-96
5.1.6	Example Problem 31 — Bending Stress	6B-98
5.1.7	Example Problem 32 — Shear Flow	6B-99
5.1.8	Example Problem 33 — Bending Stress, Composite Beam	6B-101
5.1.9	Example Problem 34 — Inertia Transformation	6B-103
5.1.10	Example Problem 35 — Stress Transformation	6B-105
5.1.11	Example Problem 36 — Strain Transformation	6B-107
5.1.12	Example Problem 37 — Stress-Strain Relations	6B-108
5.1.13	Example Problem 38 — Stress-Strain Relations	6B-109

CHAPTER 6
STATICS AND MECHANICS OF MATERIALS — SOLUTIONS IV

6.1	Solutions to Multiple Choice Problems 39 through 55	6B-111
6.1.1	Example Problem 39 — Bending Stress, Combined	6B-112
6.1.2	Example Problem 40 — Combined Stress, Bending and Torsion	6B-113
6.1.3	Example Problem 41 — Force Components, Skewed Axis	6B-115
6.1.4	Example Problem 42 — Force Components, Rectangular Axis	6B-117
6.1.5	Example Problem 43 — Force Components, Three-Dimensional	6B-118
6.1.6	Example Problem 44 — Equivalent Force — Moment System	6B-119
6.1.7	Example Problem 45 — Equivalent Force — Moment System	6B-120
6.1.8	Example Problem 46 — Moment About a Point, Two Dimensions	6B-121
6.1.9	Example Problem 47 — Component Projection, Skewed Angle	6B-122
6.1.10	Example Problem 48 — Beam with Internal Hinge	6B-123
6.1.11	Example Problem 49 — Belt Friction	6B-124
6.1.12	Example Problem 50 — Long Cables	6B-125
6.1.13	Example Problem 51 — Beam Internal Force and Moment ..	6B-126
6.1.14	Example Problem 52 — Friction, Ramp	6B-127
6.1.15	Example Problem 53 — Mass Moment of Inertia	6B-128
6.1.16	Example Problem 54 — Thin Wall Tube	6B-130
6.1.17	Example Problem 55 — Combined Stress, Shear, Bending, Torsion	6B-131
